Continuation of 11. does NOT place the application in condition for allowance because: 1. Uesaka cited in the Office Action solely for evidence purposes. It shows an advantage of using Fatty Acids in Polyamides, i.e. lower crystallinity, which leads to a better mechanical properties (i.e. flexibility) and processability of the polymer. 2. Frihart discloses a polyamide, similar to Nakamura's one, Therefore, Nakamura's polyamide can be modified with Frihart's dimerised fatty acid. The motivation can be found in the previous Office Action 3. Coquard 1 or Coquard 2 or Drawert only disclose a mixture of isophtha lic and terephthalic acids in their polyamides, which is common step to improve processability of the material.
